Create Task - Status Update 1

Anish Goyal

Gwinnett School of Math, Science, and Technology

AP Computer Science Principles - 1st Period

Ben Schepens

March 27, 2023

Author Note

The assignment was to submit a status update of their create task covering some questions about their project.

Create Task - Status Update 1

Contents

How much programming do you have left to complete?

I have completed all the programming tasks required for the project, and all the features and functionalities are working as intended. I have thoroughly tested the program and have fixed any bugs or errors that I encountered during the development process. I am glad that I did *not* complicate the Create Task as it made the project much easier to complete and my AP reader will have an easier time reading my code.

Have you "graded" yourself based on the grading rubric? What score did you give yourself?

Yes, I have reviewed the grading rubric and evaluated my project based on its criteria. I have met or exceeded the expectations for each section of the rubric. Based on my evaluation, I have given myself the highest score possible, as I have completed all the required components of the project and they are working as intended.

What problems/issues do you need to address to complete the project successfully by Friday 3/31?

Because I have already completed the project without any issues, I do not have any problems or issues that need to be addressed to meet the deadline of Friday 3/31.
